**KLV seeks partners
in pool construction**

manufacturer of made to order polypropylene swimming pools for
SWIMMINGPOOL BUILDERS AND INSTALLERS

Pool builders make a good impression with KLV's custom-made swimming pools.

Kunststof Lastechniek Verbakel has produced many hundreds of polypropylene swimming pools commissioned by swimming pool builders and installers.

Our projects characterise by a smooth construction process: from initial contact, to design, quotation and delivery.

Solid cooperation, so that all steps fit together perfectly:

From site preparation, transport, placement, installation and finishing, all in one fluid motion.

This ensures that all parties, from client, planner, excavator and end customer, know where they stand so that everything runs smoothly.

Our broad experience allows us to refine the details and provide special customisation.

We are happy to present many examples here.

- preparation of the piping for easy installation

A LUXURY CUSTOM-MADE POOL

KLV

Do your customers have a completely unique idea of what their new built-in pool should look like?

Or is there a challenge in the proportions of their garden or indoor space? Kunststof Lastechniek Verbakel makes swimming pools to measure. This gives your customers a pool exactly where they want it.

ADVANTAGES

A custom-made pool for your customers

Great of course, having a pool built in your garden or indoor space. But where can you find a pool that exactly captures your customers' wishes?

We specialise in building polypropylene pools. These can be made in any size and installed both indoors and outdoors.

DUTCH MANUFACTURER

Extremely strong plastic as a basis

We process large sheets of plastic (Polypropylene) in our immense workshop into beautiful custom-made swimming pools.

Yes, we can handle all possible square dimensions. You can choose from the material colours: white (RAL 9010), grey (RAL 7046) and anthracite (RAL 7043).

MATERIAL

What is polypropylene?

Polypropylene is a particularly strong plastic in which flaking and blistering do not occur and osmosis has no chance. It is tear-resistant and antibacterial. Even UV light cannot discolour this material.

With polypropylene, you basically install the perfect pool. This is a good starting point for surprising your customer.
